

## ALERT Station with Rain, River, Camera and Flashing Signs

### ALERT and Enviromon

The Bureau of Meteorology Enviromon software, used by many of the Councils to view flood warning system information can now be configured to trigger water over road flashing light systems. Prospect Environmental can supply the warning sign systems and also assist with the configuration of Enviromon.

### ALERT Rain / River Stations

*Interested in seeing what is actually happening at your flood warning site or road crossing?*

Prospect Environmental can help transform your existing monitoring network. Our PTZ cameras can be remotely controlled with images able to be viewed in real time.

Whether you want to upgrade an existing station or are after a complete new system, we are able to provide you with a live demo of real systems currently installed throughout Australia.
