

PROSPECT Environmental provides integrated systems that are cost effective and highly reliable, delivering real time data that ensures your environmental compliance obligations are met and your field operations are optimised.

At Prospect Environmental we specifically design and install systems for:

- Environmental Compliance
 - Extractive Industries
- Disaster Management
 - Flood Forecasting and Early Warning
 - Mass Notification - Tsunami / Flood
- Hydrological Monitoring and Data Acquisition

The Prospect Environmental team has contributed significantly to the establishment of environmental compliance monitoring systems in the Surat Basin of Queensland. This includes more than 250 remote monitoring stations installed for Santos GLNG alone. The monitoring system has been acclaimed one of the best in Australia by government and private sector industry officials.

At Prospect Environmental:

- We have a thorough knowledge of all aspects of environmental monitoring relevant to the CSG and Mining Sector. We have helped to set the standard others aim to emulate
- Your remote data is able to be collected, managed and viewed via the “2013 release” of our world leading cloud based data acquisition and reporting system
- We are committed to ensuring that your projects are a success
- Our professional approach, expertise and experience enables you to focus your efforts towards the greatest benefit
- We understand the importance of on site safety - our EH&S system and procedures ensure maximum protection for our staff and your site

- Our project teams are assembled to deliver your projects in a cost effective manner. We do this by drawing from our internal resources and associates ensuring maximum efficiency via a streamlined cost profile

Our Team

Mark Wolf is the National Manager and Principal Consultant of Prospect Environmental. Mark has more than 30 years expertise and experience in designing and installing flood forecasting and warning systems within Australia and internationally. Mark was Project Director for the multi-award winning Malaysian SMART Tunnel Flood Detection System.

Ralf Muller is the QLD Manager - Senior Engineer at Prospect Environmental. With ten years expertise and experience in the environmental monitoring sector, Ralf's major focus is within the extractive industries and is heavily involved in the CSG industry. He has been pivotal to the implementation of a field wide monitoring network of over 250 stations for one of the major players in the CSG industry – Santos.

Glen Klinberg is Prospect Environmental's Business Development Manager in QLD. He has more than 20 years' experience in Flood Warning System delivery in QLD and is highly regarded by the BoM and many of the Regional Councils.

Prospect Environmental is a division of Prospect Group Pty Ltd
